FOR IMMEDIATE RELEASE

FLANGE MOUNTING SHAFT COLLARS CAN BE CONFIGURED FOR MANY APPLICATIONS

A full line of user-machinable flange collars that are ready to mount and feature integral clamps that provide a high-strength, non-marring hold has been introduced by Stafford Manufacturing Corp. of Wilmington, MA.

Stafford Accu-Flange™ Shaft Mounting Collars are user-machinable and can be configured to perform a wide range of applications such as a pulley, cam, or component mounting device. Ready to mount with three through holes and three tapped holes, these clamping flange collars feature an integral clamp incorporating a double-split design and relief groove, retain their perpendicularity, are easy to adjust, and will not mar expensive shafts.

Available from stock in steel, stainless steel, and aluminum, Stafford Accu-Flange™ Shaft Mounting Collars include a standard keyway and come in sizes from 1/4" x 1.48" to 3" x 6.335". Designers can rapidly develop a custom solution from this 100 part standard product line and then order parts machined to specification in production quantities, if required.

Stafford Accu-Flange™ Shaft Mounting Collars are priced depending upon size and quantity with delivery from stock.
